

We recommend the following care for Microcotton terry toweling:

- Machines are at 75-100% full capacity
- Washer is set for a mix wash (hot and cold water running simultaneously)
- 5 cycles—2 wash, 2 rinse, 1 extract
- Solvent based, high alkaline liquid laundry detergent, liquid fabric softener
- Oxygenated bleach only – when needed
- Dryer is set at 160° Fahrenheit – do not dry to bone-dry stage
- Remove toweling from dryer promptly to prevent wrinkling
- Do not use fabric softeners that coat the product, as this will greatly reduce absorbency.

Notes:

- Due to Microcotton towels high degree of absorbency, they will also absorb chemicals in the wash cycle. Absorption of detergent and other chemicals that do not rinse out completely during the rinse cycle will lead to harsh toweling. Add over-drying and you've got a really harsh hand feel.
- We recommend testing the detergent amount, beginning with using half of the normal amount until a good balance be reached. If water is hard, you will have to increase.
